Re: Rancho Vistoso - Subsurface Moisture Content

Job: Forensic Study – Various Lots  
Kalalau Drive and Romsdalen Road  
Oro Valley, Arizona

ProTeX Job ID No. 12804

Attention: Mr. Andy Martinez

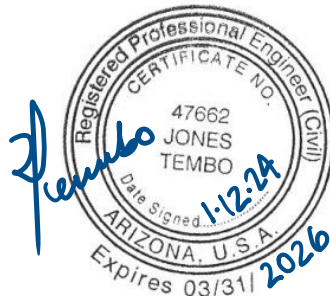

As requested by Pulte Tucson Land, we have reviewed the Meter Reading and Usage Summary report associated with the water meter located at 784 E Kalalau Drive (PCRWRD Kalalau Sewer Pump Station) for the period of 12/28/2021 to 12/29/2021. The records indicate that within that stated time frame, the water usage was about 84,630 gal over a period of about 14 hours. This is assumed to have been a utility line break that dissipated water across the surface and ultimately into the subsurface.

As stated in the ProTeX Forensic Geotechnical Investigation reports (Section 4.0), the water inundation that is mentioned is more likely than not associated with the water usage described above which was recorded by Oro Valley Water Utility.

Please contact us if you have any questions or concerns.

Respectfully submitted,

**ProTeX - the PT Xperts, LLC**

Jones Tembo, PE
